

Project Insight investigations:

- Which industries saw the most growth?
- Do companies that have been on this list longer have a higher chance of appearing again in this list?
- Does the number of workers in the company affect the growth of the company?
- Which state can you find most of the IT companies in?
- Which cities have seen the most growth?

Sheet 1

Question 1: **Which industries saw the most growth?**

From this task we see that the Consumer Products and Services Industry has displayed the most growth.

Sheet 1

Question 2: ***Do companies that have been on this list longer have a higher chance of appearing again in this list?***

So it is clear from the graph that most of the data appears to be at the lower end of the years on the list; this means that the more years a company is on the list the less likely it is to appear again. This is due to the fact that the mean is at 2 years and our 3rd percentile is at 4 years.

Sheet 1

Question 3: ***Does the number of workers in the company affect the growth of the company?***

We can see that the company with the highest number of workers has the greatest growth, however the company with the lowest growth is not the smallest company. This shows that there is no real correlation between company growth and size of company.
